Continuation of 11. does NOT place the application in condition for allowance because: the claims are still not in condition for allowance. Claim 3 is now cancelled. The scope of claim 1 has changed due to the incorporation of the limitation of claim 3, and Applicant argues that the addition of claim 3's limitation makes claim 1 allowable.

Applicant specifically argues the allowability of the limitation wherein a visitor registeration unit register the mobile station as a vistor station in the second country so that the mobile station is capable of establishing a connection via a second network in the second country when the mobile station moves to the second country and requests registration.

Toy discloses the limitations of:

providing location information of a mobile device that is roaming (roaming is defined to having communication service outside of one's home location resgistration area), either the location of where the mobile device was last registered while it was roaming, or its current location of registry (CoI 2, lines 17-22), which reads on the limitation of a visitor registration unit that register the mobile device as a visitor (roaming) station in the second country (the technology can be applied geographically even in Europe where there are interconnected countries CoI 2, line 11-12) and so the mobile station is capable of establishing a connection (communication capability while roaming CoI 1, line 29-33) via the network in the second country when the mobile station moves to the second country and requests registration (when the mobile station is registered while roaming (CoI 2, line 19-21)). As of now, the claim is not in condition for allowance.
